

NW Indiana Dentist Recieves Training in Cutting Edge Protocol to Rescue the Denture Sufferers

NW Indiana Dentist recieves training in cutting edge protocol to rescue the denture sufferers

Dyer, Indiana ([PRWEB](#)) January 21, 2009 -- The Center for Implants, Sedation, and Cosmetic Dentistry a cutting edge research and clinical center for dental medicine, Dr. Ivan Atcha debuted implant dentistry's newest and most patient-friendly protocol for healthy smiles, Teeth In An Hour. Thirteen doctors from across the globe experienced computer generated technology that permits a patient with not a single remaining tooth to have a fully functional and esthetic third set of teeth in less than an hour.

Local Implant Dentist, Dr. Ivan Atcha, participated in this training, following the new product launch at Nobel Biocare's World Conference in Las Vegas last year. The new surgical technology, which begins with a brief but comprehensive scan, permits the doctor to accomplish virtual surgery on a computer model, thus creating optimum guided surgical technique, minimally invasive for the patient.

Dr. Atcha will be the first in Northwest Indiana to be certified in the Nobel Biocare process of guided surgery. His clinical facility is located in Dyer where he treats the dentally disastrous and the fearful patients. Dr. Atcha changes lives daily by reconnecting people to what they have lost "their teeth" with the latest in dental implants.

Please contact Dr. Atcha at The Center for Implants, Sedation, and Cosmetic Dentistry for more information. The Center offers the finest esthetics available in the profession. The Center is also a major teaching center and source of research information about dental implants, sedation dentistry (for fearful patients) and cosmetic dentistry. Check them out at www.BestIndianaDentist.com and request free information. And email them Teethforyou (at) gmail.com.
