

Say Good Bye to Dentures

Dr. Ivan Atcha (Advanced Dentist-Implantologist) a Fellow of International Congress of Oral Implantologist , who practices in Dyer, IN is pleased to announce that the Center for Implants, Sedation and Cosmetic Dentistry now offers the All-On-4 immediate loading dental implants technique.

([PRWEB](#)) February 5, 2009 -- The All-on-4 (TM) technique is a new, advanced procedure that provides patients with missing teeth, a fast and cost-effective fixed restoration. Four individual dental implants are placed in one jaw to support a full-arch prosthesis, providing edentulous patients with an affordable, comfortable, pleasing solution.

With more traditional approaches, eight to twelve implants were required to replace an entire jaw with teeth, and other procedures such as bone grafting and sinus lifts were necessary. The All-on-4 techniques eliminates the need for these more invasive and costly techniques.

Additionally, with the availability of the i-CAT Cone Beam 3-D Dental CT Scan in the office Dr. Atcha has the capability to see detailed images of a patient's jaw, allowing them to make an accurate and predictable diagnosis with enhanced treatment planning. No more trips to a different place to get a specific x-ray or scan! From your initial consultation all the way through to post-operative care and follow-ups, you can do everything right in the comfort of Dr. Atcha's office.
